1. High Efficiency & Compact Design

High efficiency and compact design are realized by applying various advanced components

10~60HP (KXZ)

Multiport compressor that achieves high efficiency (KXZ, KXZ Lite)

The new multiport discharge area in the compressor has optimized pressure control with better balancing. The performance improvement at medium Hz has resulted in higher annual efficiencies.

Concentrated winding motor achieves "High Output" and "Total Efficiency Improvement"

The newly designed high performance CPU enables high precision optimization for compressor speed, which leads to concentrated winding motor use. Our product achieves high output and better energy saving effects and in particular improves seasonal efficiency rating.

*Applied for KXZE1:10/12/17/18/20HP, KXZE1:8HP & KXZ Lite:8/10HP

Improved Heat-exchanger

With piping layout rearranged from header to heat exchanger, refrigerant distribution flow has improved and maximum energy efficiency has been achieved. Heat exchanger has improved refrigerant distribution and increased effectiveness.

Furthermore due to expansion of effective heat transfer area in heat exchanger, energy efficiency has increased.

Strengthened resistance against frost

Resistance against frost has been strengthened by achieving improved heat-exchanger.

VTCC : Variable Temperature and Capacity Control (KXZ)

Normal operation (in the cooling mode)

Target low pressure was set at the constant level. When room temperature got closer to set temperature, the compressor shifted operation and repeated on-off operation continuously.

Energy saving operation (in the cooling mode)

Checking the difference between room and set temperatures, the system adjusts compressor speed and target low pressure effectively. Meeting customer's requirement, manual adjustment is available.

(Need to set 7-segment or external input)

Oil level control capability

Our proprietary technology of adjusting oil level for combination of two or three outdoor units has realized leveled operation rate, keeping performance of the units and ensuring long life of the system.

Capacity control (KXZ)

Capacity control can be set by peak cut function with RC-EX1A for better energy saving. Five-step capacity control is available. (100-80-60-40-0%)

Vector control

New applied Vector control has a high efficiency and many new advanced features.

- Smooth operation from low speed to high speed
- Smooth Sine Voltage Wave form are attained
- Energy efficiency is further improved in low speed range

Vector Control

Long-chorded 3 propeller fan with serration

Fan blade design adapted from MHI's aerospace division - with serrated edges that deliver increased air volume with less power input.

DC Fan Motor

Employment of DC fan motor has enabled to realize an excellent efficiency of approximate 60% higher than previous models.

4~6HP (Micro)

Compact high efficiency Heat Exchanger

- Optimizing relationship of the air flow velocity & fin pattern
- Improvement of air distribution Maximizing efficiency of heat exchanger

8~12HP (Micro)

2. Design Flexibility

Indoor unit capacity connection

	HP	Capacity connection
Micro model	4~12	150%
KXZ Lite	8 · 10	120%
KXZE1	10~60	130%

Capacity connection of Hi-COP KXZE1 series & KXZ Standard large connection series is 160~200%. Please refer to page 34 & 104 for the detail.

Connectable indoor units

	Touch screen	SC-SL4-AE	128	—
		SC-SL4-BE	128	●
	PC windows interface units	SC-WGWNB-A	128(64x2)	—
		SC-WGWNB-B	128(64x2)	●
	BMS interface units	SC-BGWNA256-A	256(128x2)	—
		SC-BGWNA256-B	256(128x2)	●
		SC-BGWNA-A	128(64x2)	—
		SC-BGWNA-B	128(64x2)	●
		Lonworks	96(48x2)	—

Long Pipe Length 10~60HP(KXZ)

Piping length has extended max height difference between indoor units up to 18m and enables us to put indoor units on extra three floors. The furthest indoor unit: 160m or total length: 1000m contributes to system design flexibility.

Easy Transportation & Installation

Due to realization of significant reduction in size and foot print which is one of the smallest in the industry, transportation in an elevator made for six persons (Width:1400mm, Depth:850, Open area:800mm) is possible, eliminating cost of a crane and reducing labor.

KXZ is portable and the uniform reduced footprint allows neat, continuous installation.

Wide Range of Operation (KXZ, KXZ Lite)

KXZ series permits an extensible system design considering a heating range operation under a low temperature condition down to -20°C and a cooling range operation up to 46°C (previous model : 43°C) Furthermore KXZ Lite extends a cooling range operation up to 50°C.

Automatic Select functions for capacity control (KXZ Lite)

The following 3 items are available for capacity control function.

You can select one item individually or select 2or3 items at the same time.

In case of selecting 2or3 items, the unit will operate with the most effective function automatically.

Compressor speed control

You can set compressor speed at 100%-80%-60%-40% before starting operation with PWB in the outdoor unit or with a demand controller (procured locally).

How to set "Compressor speed"

- 1 Set the function of external input (CNS1) to "Capacity control input" using P07 of 7SEG setting.
- 2 Set the Demand rate using SW4-7, 4-8 according to the following chart.
- The input signal will be through 3 CNS1. ON/ connected, OFF/ not connected

SW4-7	SW4-8	Compressor speed
OFF	OFF	80%
ON	OFF	60%
OFF	ON	40%
ON	ON	0%

Capacity control timer

You can set capacity control with RC-EX1A up to 4 times per day maximum.
The timer setting can be changed using 5 minute intervals.

※Please refer to page 8.

Silent mode

Considering noise regulations or surrounding circumstances, you can now select 4 levels of silent mode. [1] & [2]
Setting the combination of silent mode is available by using timer function of RC-EX1A.

- Silent mode [1] : Priority for capacity
This is an effective function during low load operation conditions.
This setting may be cancelled in overload conditions.
- Silent mode [2] : Priority for silent mode
Regardless of operation conditions, the outdoor unit will keep the operation at the selected sound level.

3 Layer Construction

Thanks to control box structure with 3 layer/2 layer construction using hinge connection, service and maintenance has been made much easier for inverter components.

KXZ
(3 layer)

KXZ Lite
(2 layer)

Blue Fin

Due to application of blue coated fins for the heat exchanger of new outdoor unit, corrosion resistance has been improved compared to current models.

**Blue
Fin**

Improved features (KXZ Lite)

Improved freedom of piping layout

Wire insertion holes for fall prevention

External static pressure

Four handles

Located at the same level for easy transport and transfer.

A transparent rain cover

Attached as a standard for easy maintenance.

Fixing screws to service panel

Decreasing number of screws from 5 to 2, installation & service speed is improved.

Heat pump systems

The heat pump systems operate with 2 inter-connecting pipes, thus commonly referred to as a '2-pipe system'.

These systems provide either a heating or cooling operation to all indoor units and are suitable for a wide range of applications from an individual apartment to an entire multi storey building, especially where there are significant open plan areas to be controlled.

The range starts with a 11.2kW cooling capacity, up to 20HP with 56.0kW cooling capacity. Outdoor units can also be "twinned" or "tripled" providing up to 60HP/168.0kW on a single system.

The range has a total piping length of 1000m (KXZ) and the furthest indoor unit can be connected up to 160m (8HP+, KXZ, Micro) from the outdoor unit.

Fixed Cooling mode/fixed heating mode (summer/winter switch):

It is possible to fix the operational mode of the system (either cooling or heating) using a switch (SW3-7) on the outdoor unit PC board - this enables the building user to decide the operation of the system (e.g. cooling only in summer/heating only in winter), to avoid unnecessary energy wastage. It is also possible to wire the control switch to a remote location (inside the building) to a control room, or even linked to an ambient thermostat.

Priority operation mode rule (KXZ, KXZ Lite)

You can select the following priority operation mode. (for whole system)

1. First unit's operation mode (by default setting)
2. Last unit's operation mode
3. Majority operation mode (see below)
4. Master operation mode (see below)

<Majority operation mode>

The system is operated according to the mode selected by the majority of units in operation (whichever greater capacity between the sums of cooling mode and heating mode). The operation mode in minority is set to fan mode automatically.

<Master operation mode>

The system is operated according to master operation mode. When master operation mode is set at cooling mode, units selected as heating mode is set to fan mode automatically.

Benefits Summary (Indoor units)

When using RC-EX1A (Remote control), functions with symbol ● are available.

However, for RC-E5 (Remote control), functions with ※ are not available.

Economy	Inverter technology	Inverter control technology functions at high efficiency with smooth operation from high speed to low speed. A smooth sine voltage wave is attained.
	Energy-saving ※	Since the capacity is controlled automatically based on the outdoor temperature, energy can be saved without losing comfort.
	Home leave operation ※	When the unit is not used for a long period of time, the room temperature is maintained at a moderate level, avoiding extremely hot or cool temperatures.
	Set temperature auto return ※	The temperature automatically returns to the previously set temperature.
Comfort	Automatic operation	The air conditioner automatically selects from among heating, cooling operations.
	Silent mode	The unit can be set to prioritise the period of time it operates at a lower noise level.
	Draught prevention	When starting to warm up or when the thermostat is off, the air discharge direction is set horizontally and the fan to low speed, to prevent draught. After warming up, air discharge and fan speed are set as desired.
	Hi power mode ※	The high power operation adjusts the room temperature quickly to a pleasant level by increasing the operation capacity. The high power operation continues for 15 minutes at maximum and returns to the normal operation automatically.
Air flow	Individual flap control	Motion range (upper and lower limit positions) of the flap at each air outlet can be set at a desired range individually.
	Vertical auto swing	Flap moves up and down continuously. The Up/Down flap swing can be fixed at the preferred operation angle.
	Ceiling stain prevention	The shape & angled louver redirects the air current away from the ceiling reducing ceiling stains.
	Automatic fan speed	The micro-computer automatically adjusts the airflow effectively to follow the changes of return air temperature.
Timer	Sleep timer	Set the time period from start to stop of operation. The selectable range of setting time is from 30 to 240 minutes (at 10-minute intervals).
	Peak-cut timer ※	Capacity control can be set by using peak cut function on RC-EX1A for better energy saving. Five-step capacity control is available.
	Weekly timer	On or Off timer can be set on a weekly basis.
Convenient	Static pressure adjustment	This is operable when connecting duct type indoor units equipped with the external static pressure adjustment function. It will adjust the airflow accordingly based on the connected duct static pressure.
	Remote control	You can select wired remote controls, wireless remote controls or central remote controls.
	Select the language ※	Set the language to be displayed on the remote control.
	Air filter	Removes airborne dust particles through the air filter to ensure a steady supply of clean air.
	Filter sign	Announces the due time for cleaning of the air filter.
	Outside air intake	Outside fresh air can be taken inside.
Others	Self-diagnosis	In the case that the air conditioner malfunctions, an internal microcomputer automatically runs a self-diagnosis. (Inspection and repair should be performed by authorized dealers.)
	Drain up	It allows for a flexible piping layout for condensate allowing a high degree of freedom depending on the installation location

*1 : Except 224・280 *2 : Except 1800・2400

Micro Outdoor units

Heat pump systems 4, 5, 6HP (11.2kW~15.5kW)

Model No.	Nominal Cooling Capacity
FDC112KXEN6	11.2kW (1Phase)
FDC140KXEN6	14.0kW (1Phase)
FDC155KXEN6	15.5kW (1Phase)
FDC112KXES6	11.2kW (3Phase)
FDC140KXES6	14.0kW (3Phase)
FDC155KXES6	15.5kW (3Phase)

- These heat pump 2-pipe systems offer high performance VRF for applications that require either cooling only or heating only, ideal for open plan areas.
- Connect up to 8 indoor units/up to 150% capacity.
- High efficiency with COP (in cooling) up to 4.0.
- These units employ DC inverter compressors ONLY.
- Industry leading total piping length up to 100m and a maximum pipe run of 70m.

* The total length of ø9.52mm(3/8") liquid piping must be 50m or less

Note:FDUT15KXE6F-E and FDC15KXE6F can not be connected to the above systems.

1. The data are measured under the following conditions(ISO-T1). Cooling: Indoor temp. of 27°CDB, 19°CWB, and outdoor temp. of 35°CDB. Heating: Indoor temp. of 20°CDB, and outdoor temp. of 7°CDB, 6°CWB. Piping length is 7.5m.
2. Sound pressure level indicates the value in anechoic chamber. During operation these values are somewhat higher due to ambient conditions.

Notes:

- (1) It must not be surrounded by walls on the four sides.
- (2) The unit must be fixed with anchor bolts. An anchor bolt must not protrude more than 15mm.
- (3) Where the unit is subject to strong winds, lay it in such a direction that the blower outlet faces perpendicularly to the dominant wind direction.
- (4) Leave 1m or more space above the unit.
- (5) A wall in front of the blower outlet must not exceed the units height.
- (6) The model name label is attached on the lower right corner of the front panel.

〈For EU/EEA area only〉

Based on European regulations listed below, please refer the following specification table.

No.626/2011 of 4 May 2011: energy labeling of air-conditioners(below cooling capacity 12kW)

No.206/2012 of 6 March 2012: requirement for air-conditioners and comfort fans

Specification table

Outdoor unit		FDC112KXEN6/112KXES6	
Indoor unit		FDT series only	FDT series & others
Energy class(cooling/heating)		A+/A+	C/A
SEER		6	4.3
SCOP(Average climate)		4.2	3.8
Pdesignnc	kW	11.2	
Pdesignnh(@-10°C)	kW	9.5	
Annual energy consumption(cooling/heating)	kW	664/3212	910/3515
Sound power level	dB(A)	68	
Refrigerant (GWP)		R410A (1975)	
Designated heating season		Average	
Capacity combination	%	96.4~104.5	
Number of connectable indoor units		5	

R410A refrigerant contained in the products is a fluorinated greenhouse gas listed in Regulation (EU) No 517/2014.

Micro Outdoor units

Heat pump systems 8, 10, 12HP (22.4kW~33.5kW)

Model No.	Nominal Cooling Capacity
FDC224KXE6	22.4kW
FDC280KXE6	28.0kW
FDC335KXE6	33.5kW

- These heat pump 2-pipe systems offer high performance VRF for applications that require either cooling only or heating only, ideal for open plan areas.
- Connect up to 24 indoor units/up to 150% capacity.
- High efficiency with COP (in cooling) up to 4.0.
- These units employ DC inverter compressors ONLY.
- Industry leading total piping length up to 510m and a maximum pipe run of 160m.

*The difference between the longest and the shortest indoor unit piping from the first branch must be within 40m.

Range of operation

Specifications

Item			Model	FDC224KXE6	FDC280KXE6	FDC335KXE6
Nominal horse power				8HP	10HP	12HP
Power source				3 Phase 380-415V, 50Hz		
Starting current			A	5		
Max current			A	20		23
Nominal capacity	Cooling		kW	22.4	28.0	33.5
	Heating			25.0	31.5	37.5
Electrical characteristics	Power consumption	Cooling	kW	5.60	8.09	9.82
		Heating		6.03	8.21	10.12
Exterior dimensions		HxWxD	mm	1675x1080x480		
Net weight			kg	221		224
Refrigerant charge		R410A	kg	11.5		
Sound pressure level		Cooling/Heating	dB(A)	58/58	59/60	61/61
Refrigerant piping size	Liquid line		mm(in)	ø9.52(3/8")		ø12.7(1/2")
	Gas line			ø19.05(3/4")	ø22.22(7/8")	ø25.4(1") [ø22.22(7/8")]
Capacity connection			%	50~150		
Number of connectable indoor units				22	24	24

1. The data are measured under the following conditions(ISO-T1). Cooling: Indoor temp. of 27°CDB, 19°CWB, and outdoor temp. of 35°CDB. Heating: Indoor temp. of 20°CDB, and outdoor temp. of 7°CDB, 6°CWB. Piping length is 7.5m.
 2. Sound pressure level indicates the value in an anechoic chamber. During operation these values are somewhat higher due to ambient conditions.
 3. [] : Pipe sizes applicable to European installations are shown in parentheses.

KXZ Lite Outdoor units

Heat pump systems 8, 10HP (22.4kW · 28.0kW)

Model No.	Nominal Cooling Capacity
FDC224KXZPE1	22.4kW
FDC280KXZPE1	28.0kW

- These heat pump 2-pipe systems offer high performance VRF for applications that require either cooling only or heating only, ideal for open plan areas.
- Connect up to 8 indoor units/up to 120% capacity.
- High efficiency with COP (in cooling) up to 4.0.
- These units employ DC inverter multiport compressors with concentrated winding motor.

Range of operation

L2	300	5	Open
L3	150	300	150
L4	250 (5)*1	250 (5)*1	250 (5)*1

Notes:

*1 At the time of the installation at () dimension, Secure space of 250mm in lateral (L4) by unit movement at the time of the exchange work of the compressor.

Mark	Item	
A	Service valve connection of the attached connecting pipe (gas side)	ø19.05 (3/4") (Flare)
B	Service valve connection (liquid side)	ø9.52 (3/8") (Flare)
C	Cable draw-out hole (front · side)	ø30 × 2places
D	Cable draw-out hole (front · side)	ø45 × 2places
E	Cable draw-out hole (back)	ø50
F	Pipe/cable draw-out hole	4places
G	Drain discharge hole	ø20 × 3places
H	Anchor bolt hole	M10 × 4places

Notes:

- (1) It must not be surrounded by walls on the four sides.
- (2) The unit must be fixed with anchor bolts.
An anchor bolt must not protrude more than 15mm.
- (3) Where the unit is subject to strong winds, lay it in such a direction that the blower outlet faces perpendicularly to the dominant wind direction.
- (4) Leave 1m or more space above the unit.
- (5) A wall in front of the blower outlet must not exceed the units height.
- (6) The model name label is attached on the lower right corner of the front panel.
- (7) Connect the Service valve with local pipe by using the pipe of the attachment. (Gas side only) (Accessory pipe is used only by FDC280KXZPE1)
- (8) Regarding attaching the pipe of accessories, refer to an attached installation manual.

KXZ Outdoor units

Heat pump systems 10, 12HP (28.0kW, 33.5kW)

Model No.	Nominal Cooling Capacity
FDC280KXZE1	28.0kW
FDC335KXZE1	33.5kW

Uniform footprint of models (10,12HP) allows continuous side-by-side installation

- The KXZ heat pump 2-pipe systems offer high performance VRF for applications that require either cooling only or heating only, ideal for open plan areas.
- Connect up to 29 indoor units/up to 130% capacity.
- High efficiency with COP (in cooling) up to 3.9.
- KXZ employs DC inverter compressors ONLY.
- Industry leading total piping length up to 1000m and a maximum pipe run of 160m.

- *1 The difference between the longest and the shortest indoor unit piping from the first branch must be within 40m. (MAX85m)
- *2 In case of height difference up to 70m, please contact your dealer. Height difference up to 90m is possible with High Head series. Please refer to page 110.

1. The data are measured under the following conditions(ISO-T1). Cooling: Indoor temp. of 27°CDB, 19°CWB, and outdoor temp. of 35°CDB. Heating: Indoor temp. of 20°CDB, and outdoor temp. of 7°CDB, 6°CWB. Piping length is 7.5m.
2. Sound pressure level indicates the value in an anechoic chamber. During operation these values are somewhat higher due to ambient conditions.
3. [] : Pipe sizes applicable to European installations are shown in parentheses.

- The KXZ heat pump 2-pipe systems offer high performance VRF for applications that require either cooling only or heating only, ideal for open plan areas.
- Connect up to 80 indoor units/up to 130% capacity.
- High efficiency with COP (in cooling) up to 3.6.
- KXZ employs DC inverter compressors ONLY.
- Industry leading total piping length up to 1000m and a maximum pipe run of 160m.

- *1 The difference between the longest and the shortest indoor unit piping from the first branch must be within 40m. (MAX85m)
- *2 In case of height difference up to 70m, please contact your dealer. Height difference up to 90m is possible with High Head series. Please refer to page 110.

In case the ambient temperature becomes 43°C or higher during cooling operation

Heat recovery systems - for simultaneous heating and cooling

The heat recovery systems operate with 3 inter-connecting pipes, thus commonly referred to as a '3-pipe system'.

The systems provide both heating and cooling operations to individual indoor units according to the room condition/requirement. The systems incorporate highly sophisticated control to condition multiple indoor areas, whatever their requirement for cooling or heating, for

applications where the building orientation (N, S, E, W) can mean that heat gain/loss varies on each side of the building.

The range starts from the 8HP model (22.4kW) cooling capacity, up to the largest capacity single outdoor unit in the industry (24HP) with 68.0kW cooling capacity. Outdoor units can also be "twinned" providing up to 48HP/136.0kW on a single system.

1. 12HP, 20HP, 22HP & 24HP are applied 3D compressor.

2. FDC335KXRE6-K & FDC560KXRE6-K are only used for combining with other models.

Capacity connection

HP	KXRE6
8~16	200%
18~34	160%
36~48	130%

- In case that capacity connection is more than 130%, additional charge of refrigerant is required on site.
- In case of 8-34HP of the systems, if one or more indoor units of FDK, FDFL, FDFU and/or FDFW series are connected to the system, the total connecting capacity of indoor units should not exceed 130%.

Up to 89 indoor units can be connected to the largest capacity outdoor unit, with a range of 17 types of exposed or concealed indoor unit, in several capacities, a choice of 89 indoor units is available.

	※1				
FDT	FDT	FDTW	FDT	FDTQ	FDU
	※1				
FDUM	FDUT	FDUH	FDK	FDE	FDFW
FDFL	FDFU	FDU-F	SAF	SAF-DX	

※1 FDUT15KXE6F-E and FDT15KXE6F can not be connected to the systems.

Heat recovery systems - for simultaneous heating and cooling

The system interconnecting pipework has a unique arrangement, with two of the interconnecting pipes routed through a PFD Distribution Controller, and the third pipe connected directly to each indoor unit from the main pipe run. This reduces installation time, and the number of brazed connections on site. The PFD Distribution Controllers are available for single connection, or as a combined PFD 4-way connection, with each connected unit having independent cooling or heating operation.

During defrosting or during automatic protection of a compressor, which is activated every several hours in heating operation, heating operation temporarily stops and restarts after some period. The series has the same automatic protection of compressor in cooling operation also. During this protection period air flow only comes on and cooling operation restarts after some period.

This model is not suitable for the usage of annual cooling operation such as for the server room, especially in the area where the outdoor air temperature becomes below 5°C. In case of mixed operation in cooling and heating mode below 5°C of outdoor air temperature, the cooling capacity may decrease in comparison with that for the operation only in cooling mode.

Heat recovery 3-pipe systems 8, 10, 12, 14, 16HP (22.4kW – 45.0kW) for simultaneous *heating* and *cooling*

Model No.	Nominal Cooling Capacity
FDC224KXRE6	22.4kW
FDC280KXRE6	28.0kW
FDC335KXRE6	33.5kW
FDC400KXRE6	40.0kW
FDC450KXRE6	45.0kW

- Heat recovery systems offer high performance VRF for almost every type of building, with the capacity for simultaneous heating and cooling operations of individual indoor units. Energy efficiency is maximised by employing DC inverter compressors ONLY, and distributing surplus heat from cooling operations to areas where it is required (and vice versa) resulting in COP (in cooling) from 3.7 to 4.2.
- Connect from 50% up to 200% capacity indoor units.
- Industry leading total piping length up to 1000m and a maximum pipe run of 160m.

* The difference between the longest and the shortest indoor unit piping from the first branch must be within 40m.

Uniform footprint of all models (from 8HP~24 HP) allows continuous side-by-side installation

	Suction Gas line			ø19.05(3/4")	ø25.4(1") [ø22.22(7/8")]		ø25.4(1") [ø28.58(1 1/8")]	
	Discharge Gas line			ø15.88(5/8")	ø19.05(3/4")		ø22.22(7/8")	
Capacity connection			%	50~200				
Number of connectable indoor units				20	25	30	36	40

1. The data are measured under the following conditions(ISO-T1). Cooling: Indoor temp. of 27°CDB, 19°CWB, and outdoor temp. of 35°CDB. Heating: Indoor temp. of 20°CDB, and outdoor temp. of 7°CDB, 6°CWB. Piping length is 7.5m.
2. Sound pressure level indicates the value in an anechoic chamber. During operation these values are somewhat higher due to ambient conditions.
3. [] : Pipe sizes applicable to European installations are shown in parentheses.

Heat recovery 3-pipe systems 18, 20, 22, 24HP (50.4kW – 68.0kW) for simultaneous *heating* and *cooling*

Model No.	Nominal Cooling Capacity
FDC504KXRE6	50.4kW
FDC560KXRE6	56.0kW
FDC615KXRE6	61.5kW
FDC680KXRE6	68.0kW

- Heat recovery systems offer high performance VRF for almost every type of building, with the capacity for simultaneous heating and cooling operations of individual indoor units. Energy efficiency is maximised by employing DC inverter compressors ONLY, and distributing surplus heat from cooling operations to areas where it is required (and vice versa) resulting in COP (in cooling) from 2.6 to 3.3.
- Connect from 50% up to 160% capacity indoor units.
- Industry leading total piping length up to 1000m and a maximum pipe run of 160m.

Uniform footprint of all models (from 8HP~24HP) allows continuous side-by-side installation

*The difference between the longest and the shortest indoor unit piping from the first branch must be within 40m.

PFD refrigerant flow branch control

Branch control

PFD1123-E
PFD1803-E
PFD2803-E
PFD1123X4-E

Total downstream indoor unit capacity

less than 11.2kW
less than 18.0kW
28.0kW or less
less than 44.8kW(less than 11.2kWx4 branches)

Relay kit
(Relay kit comes attached to the branch control)

- The remote control setting (as individual indoor unit on-off, temperature setting other than cooling/heating mode control) is possible with one remote control connected to each indoor unit, while at the same time, Center Control (SC-SL1N/2NA/4-AE) can be used together with the individual remote control.
- It is necessary to set the central control to use this function. Please refer to the Installation Manual for details.

- In case of the mode changeover from cooling to heating and from cooling to heating, by the use of only the indoor units and PFD box combination, the mode changeover sound was reduced. All this made possible without turning off the compressor and at the same time without the reduction of capacity.

- The risk of refrigerant leakage was reduced by changing piping connection at the PFD box to brazing method.

- By the use of optional PFD box extension cable that has a connector at ends, makes it possible to further separate the indoor unit and PFD box. This will enable the PFD box to be located away from the indoor unit and help reduce the influence of sound caused by PFD box and refrigerant flow.

extension cable 15m

PFD-15WR-E (option)

Easy installation

New PFD design means the connection of the indoor unit liquid pipe is made directly to the liquid line - bypassing the PFD. This means (x2) less pipe connections per indoor unit, reducing installation time and cost.

The PFD is connected to the indoor unit by 3 core signal wire via a relay kit (supplied) to be located within 2m of each other. The indoor unit however can be up to 40m away. Power to the PFD can be connected from the indoor unit or other supply.

Groups of indoor units can be connected up to a total capacity 44.8kW to a single PFD with branch piping and all units in that group will operate in the same mode only (cooling or heating).

We also have introduced the 4-way PFD control PFD1123X4-E which can connect up to four indoor units with individual control - simultaneous cooling or heating.

4-Way PFD box

Branch control	Total downstream capacity	*Connectable indoor units
PFD1123-E	less than 11.2kW	1-5
PFD1803-E	less than 18.0kW	1-8
PFD2803-E	28.0kW or less	1-10
PFD1123X4-E	less than 44.8kW(less than 11.2kWx4 branches)	Up to 20

*Refer to Data Book for details

Refrigerant piping

Installation of Interconnecting Pipework

Mitsubishi KXZ/KX6 equipment is manufactured to the highest standards of quality and reliability. It is imperative the method of installation and the materials used are also to high standards, to ensure trouble free operation and long term reliability. The interconnecting pipework must be installed by a competent and trained engineer. Refrigeration quality copper tube must be used, soft copper coils or half-hard straight lengths. The refrigeration quality tube must be soft drawn seamless high grade copper pipe. The copper tube must be selected taking into account the higher operating pressures of R410A refrigerant, and that high pressures will occur throughout the system because of the reverse cycle operation. All pipework material used should be EN12735 European standard.

The supplied branch pipe kits, must be used to make connections to indoor units, and the supplied manifold kits must be used to make connections between outdoor units (where applicable); it is not permitted to use standard fittings such as elbows, tees etc. The branch pipes shall be installed in accordance with the manufacturer's instructions, allowing unrestricted flow of refrigerant, and in accordance with European standard E378. All brazed joints shall be made with dry nitrogen purge to ensure the prevention of oxidation to the internal surface of the copper pipes.

The ingress of moisture, dirt and any other contaminants to the interior of the copper pipes, and air conditioning units, must be prevented during the installation procedure. After the installation of pipework, prior to the

connection of the outdoor units, and sealing of insulation joints, the pipework must be pressure tested for leakage, using dry nitrogen.

Additional Refrigerant

Additional R410A refrigerant only shall be used, and must be charged by weight only, using electronic scales. The amount of additional refrigerant must be accurately calculated from the manufacturer's data, based on the length and diameter of each section of the liquid refrigerant pipework of the system.

The products contains fluorinated greenhouse gases covered by Kyoto protocol.

Outdoor unit's branch piping set

Outdoor unit	Branch piping set
2 units (for 735~1360)	DOS-2A-1-RG

Indoor unit's first branch piping set

Total capacity of indoor units	Branch piping set
~179	DIS-22-1-RG
180~370	DIS-180-1-RG
371~539	DIS-371-2-RG
540~	DIS-540-2-RG

For Down Stream of PFD box

Total capacity of indoor units	Branch piping set
~179	DIS-22-1G
180~370	DIS-180-1G
371~539	DIS-371-1G

Electrical wiring – power supply

KXZ/KX6 includes greatly simplified wiring requirements utilising a 'polarity-free' two wire control loop connecting the indoor units.

Power wiring

Cables can be laid through the front, right, left or bottom of the outdoor unit casing.

Separate power supplies should be used for the outdoor unit (3Phase) and the indoor units (1Phase).

Only control wiring is connected from outdoor to indoor unit.

CAUTION

If the earth leakage breaker is exclusively for ground fault protection, then you will need to install a circuit breaker for wiring work.

Outdoor unit mechanical compartment

Electrical component box

Outdoor unit power supply terminal block

Electrical wiring – control wiring

1. The control wiring is 5 Volt DC, non-polarised, two wire connection notated as 'A1' and 'B1'. This 'AB' wiring connects outdoor unit to indoor unit and indoor unit to indoor unit.

2. This wiring must be a 2-core shielded cable size 0.75mm² or 1.25mm².

	0.75mm ²	1.25mm ²
~1000m	YES	YES
1000~1500m	YES	NO

3. We recommend the both ends of the shield of the cable are connected to ground (earth) at all the indoor units and outdoor units.

4. When plural outdoor units are used,
 • Connect the signal cable between indoor and outdoor units and the signal cable between outdoor units belonging to the same refrigerant line to A1 and B1.
 • Connect the signal line between outdoor units on different refrigerant lines to A2 and B2.

5. For current specification of 2-core (AB) wiring, please consult your MHI dealer.

(1) When one outdoor unit is used

○ Indoor and outdoor signal lines do not have a polarity. Any of the connections in the following illustration can be made.

(2) When plural outdoor units are used

- (a) The maximum number of indoor units that can be connected in a system is 128 and it is possible to configure outdoor units and/or indoor units as an outdoor or indoor unit group connected with each other with two wires.
 (b) The signal wires can also be connected using the method shown below.

(3) The signal lines can also be connected using the method shown below.

Important

○ Loop wiring prohibited

The signal lines cannot form a loop, so the wirings shown as in the diagram are prohibited.

Remote control wiring specifications

For interconnecting wiring between the remote control and indoor units (XY wiring) use 2-core cable size 0.3mm². The maximum length of 2-core cable is 600 metres. Where the 2-core wiring exceeds 100m, use the wire size detailed on the table below.

Length (m)	Wire size
100 to 200	0.5mm ² x 2 core
To 300	0.75mm ² x 2 core
To 400	1.25mm ² x 2 core
To 600	2.0mm ² x 2 core

Individual flap control system

According to room temperature conditions, four directions of air flow can be controlled by individual flap as preferred. Individual flap control is available even after installation.

Due to optimization of outlet design of air flow with our new advanced technology, sufficient air flow is secured and long reach of air flow is realized.

The thinnest design

Thanks to new design of heat exchanger changed from 2 parts to 1 part, the height of indoor unit is reduced drastically. Furthermore applying DC fan motors to FDT models, the highest energy efficiency level, reduction of weight and significant compact design are realized.

Shape of Heat exchanger

Flap control system

Selection of flap position is possible. Individual flaps can be set at different angles.

* RCH-E3 is not applicable to the individual flap control system and the flap control system.

Taking OA (Outside Air) into inside

OA Spacer TC-OAS-E (option)
Joint Duct TC-OAD-E (option)

Utilizing OA spacer which comes as optional equipment, outside air can be taken inside.

Using 1 joint duct:
OA up to 1.3m³/min.
Using 2 joint ducts:
OA from 1.3 to 2.6m³/min.

Quiet operation (Sound pressure level in the Lo mode.)

The industry's lowest sound pressure level:25dB(A) of FDT15KXE6F was achieved by Optimizing fan speed and distributor size.

Flap control system

The flap can swing within the range of upper and lower flap position selected with wired remote control.

*Wireless remote control and RCH-E3 is not applicable to the individual flap control system and the flap control system.

Installation workability

Drainage spout

Drainage flow test can be done easily by use of this drainage spout.

Transparent access hole to drain pan

Dirt condition of the bottom of a drain pan can be checked through this transparent access hole without removing drain pan.

750mm Drain Pump

Drain can be discharged upward by 750mm from the ceiling surface close to the indoor unit. It allows a piping layout with a high degree of freedom depending on the installation location.

External Static Pressure(E.S.P.) control

You can set External Static Pressure (E.S.P.) by method of manual setting on remote control. Indoor unit will control fan-speed to keep rated air flow volume at each fan speed setting. You can set required E.S.P. by wired remote control that calculated with the set air flow rate and pressure loss of the duct connected.

RC-E5

E.S.P. button

External Static Pressure (E.S.P.) can be set by E.S.P. button.

*Range of 80~150 Pa is set at ex-factory default.

Range of 10~200 Pa is available by setting SW8-4 switch on at site.

Wireless

RCN-KIT3-E

External Static Pressure(E.S.P) control

You can set External Static Pressure (E.S.P.) by method of manual setting on remote control. Indoor unit will control fan-speed to keep rated air flow volume at each fan speed setting. You can set required E.S.P. by wired remote control that calculated with the set air flow rate and pressure loss of the duct connected.

RC-E5

E.S.P. button

External Static Pressure (E.S.P.) can be set by E.S.P. button.

*Range of 80~150 Pa is set at ex-factory default.

Range of 10~200 Pa is available by setting SW8-4 switch on at site.

Quiet operation:45dB(A)

Thanks to use of DC fan motor, fan steps increase from two to four and quiet operation is achieved. (Sound pressure level 45dB(A) in the Lo mode).

Improvement of the serviceability

Fan unit (impeller and motor) can be pulled out from the right side of the unit. Maintenance can be available from the right side or the bottom side. (Common for FDUM22~160KXE6F & FDU45~160KXE6F)

Automatic external static pressure (E.S.P.) control

Duct design was simplified.
Using DC motor, the most optimum air flow volume can be achieved by this automatic control.
Indoor unit will recognize external static pressure by itself automatically and keep rated air flow volume.

Thin design

The height of all FDUM models is only 280mm.

FDUM112/140KXE6F

Compact and thin size, light weight

Our leading high technology has realized the best solution for air conditioning in hotels with compact and thin size units and high energy efficiency. In addition, weight is only 20kg.

Quiet operation

The lowest sound level in the industry can ensure comfortable stay and rest in hotels.

Installation Flexibility

Control box and drain piping can be installed on both side of the unit and air intake to the unit is available from bottom or back side. Our highest technology can satisfy diverse installation requirements.

Wired remote control

RCH-E3 (option)

Simple remote control

Considering specialized usage in hotel rooms, control buttons are limited only to minimum required functions such as ON/OFF, mode, temperature setting and fan speed. It is really simple and easy to use.

Innovative Design

Fast ← → Slow
Colors in the figure show the air speed.

FDK models adopt the air flow design that's proven to minimise resistance in a CFD analysis to achieve uniform air conditioning to the furthest corners of the room.

Flap control system

Selection of flap position is possible. A flap can be set at different angles.

*RCH-E3 is not applicable to the flap control system.

Installation Workability

The slimmer design allows easy & neat installation even in tight spaces.

Improved Maintainability

Also included is an easy clean mechanism where the front panel is opened/closed simply from the bottom to easily access the detachable filters.

Flap control system

Selection of flap position is possible. A flap can be set at different angles.

*RCH-E3 is not applicable to the flap control system.

Reduction of weight

Thanks to decreasing the numbers of fan motor from two to one, reduction of weight was achieved.

	Current		New	
FDE71	37	➔	33	4kg less!!
FDE112	49	➔	43	6kg less!!
FDE140	49	➔	43	6kg less!!

Reduction of sound pressure level (Lo mode)

The industry's lowest sound pressure levels were achieved by decreasing air flow volume, decreasing pressure loss with employment of one fan motor and optimizing casing and distributor shape.

Sophisticated Design

With classy semi flat front panel in chic white, the new series fit in various kinds of rooms and create relaxing atmosphere. Choice of wall hanging, floor standing or behind gallery installation is available.

Quiet Operation

Thanks to optimum balance of air outlet direction and sufficient air flow volume, the sound level has been minimized. The level of FDFW28KXE6F in the cooling lo mode is 30dB(A) only.

Flap control system

Selection of flap position is possible. A flap can be set at different angles.

*RCH-E3 is not applicable to the flap control system.

Convenient to use operation

Simultaneous lower and upper air outlets or upper outlet can be selected by air flow direction button. Further control can be arranged by a remote control.

(In case of use of wireless remote control)

Air conditioning and intake of outdoor air are in the same system

Outdoor Air processing unit can be connected in a KXZ system as one of indoor unit series and can create fresh and comfortable air supply together from our high advanced technology.

Compact design

Compact design at just 280(650, 1100), 379(1800, 2400)mm in height, high static pressure of 200Pa and the industry's lowest noise level can meet various kind of installation location for office, refresh room, restroom and kitchen of restaurant etc.

- (1) This unit is the specific unit for processing the outdoor air temperature closer to the room temperature. For conditioning the room temperature a dedicated air-conditioner is required additionally.
- (2) This unit monitors the outdoor air temperature and controls thermostat ON/OFF at the setting temperature by the remote controller, which indicates the outdoor air temperature for controlling thermostat ON/OFF. When thermostat is turned OFF, the operation is changed to the fan mode so that unprocessed outdoor air will be blown into the room directly. Therefore place the air outlet port or orient the air outlet direction not to blow air directly to persons in the room, especially in the small room such as a restroom and/or sanitary hot water supplying room.
- (3) It is strictly prohibited to monitor the room temperature by switching to the thermistor at remote controller side and/or the optional remote thermistor. Otherwise dew formation at air outlet port and/or dew dripping may occur during cooling operation due to the lower outdoor air temperature. Therefore keep the remote controller of this unit in place closer to the administrator so as not to be touched it freely by the end user.
- (4) Dehumidifying operation with this unit is prohibited.
- (5) When handing over this unit to the end user, make sure to explain sufficiently about the foregoing cautions, the installation place and usage of remote control for this unit and the location of the air outlet.

Connectivity with Outdoor units

FDU-F series are connectable to 8~60HP outdoor units, not connectable to 4~6HP, KXZ Lite.

Combination with Outdoor units

	case	Combination
A	In case OA processing units only are connected with outdoor units.	The total capacity of FDU-F is 50~100% of outdoor capacity and max quantity of FDU-F is 2 units.
B	In case both of OA processing units and dedicated air-conditioner are connected with outdoor units.	The total capacity of FDU-F and dedicated air-conditioners is 50~100% of outdoor capacity and max quantity of FDU-F should be below 30% of outdoor unit capacity.

Concept (Difference between FDU-F and SAF)

SAF is the energy recovery ventilation unit which can recover heat energy from exhaust air to supply air and "has no air processing function, but FDU-F is air processing unit which can treat the supply air closer to room temperature by cooling or heating in connection with KXZ refrigerant system and exhaust air is discharged to outside of the room.

FDU-F OA Processing units

SAF

Refrigerating piping size	(in)	Gas line:ø15.88(5/8")		Gas line:ø19.05(3/4")	Gas line:ø22.22(7/8")

1. The data are measured at 33°CDB 28°CWB (68%RH) during cooling and 0°CDB-2.9°CWB (50%RH) during heating (no frost).

2. Temperature range of outdoor air must be 20~40°CDB (32°CWB) during cooling and 0~24°CDB during heating.

3. Sound level indicates the value in an anechoic chamber. During operation these value are somewhat higher due to ambient conditions.

4. The factory E.S.P. setting is set within the range of 10 - 120Pa.If SW8-4 is turned to "ON", E.S.P. setting range can be changed to 10 - 200 Pa. (with RC-EX1A and RC-E5 only)

Energy Performance of Building Directive - EPBD

EPBD limit the amount of electrical/gas power to be used to provide heating or cooling in commercial buildings. Therefore the building designer needs to select energy efficient heating/cooling equipment, and to minimise energy losses through ventilation systems.

The SAF recovers heat energy which would otherwise be exhausted to atmosphere, and uses this energy to warm the air entering the building. The reverse happens in warmer climates, where the exhausted cool air is used to partially cool the incoming air.

Capturing this waste energy, means the heating/ cooling requirements of the building are reduced, so smaller size plant can be selected, savings can be made in long term energy consumption, and carbon emissions are reduced.

Increased external static pressure at UHi air flow

- SAF-DX is a heating or cooling coil incorporating MHI KXZ series controls. It can be used in combination with our SAF series of total heat exchanger.
- Combination of SAF-DX together with other indoor units is possible. The capacity code index of each model is shown below and must be used when making the system selection. Total capacity code index must be within 100% of outdoor unit capacity code index.
- Remote control option is the same as with other indoor units (see above). Connection to all Superlink controls is also possible.
- Optional condensate lift mechanism is also available (600mm height).
- Return air temp. control or supply air temp. control can be selectable.

SAF-DX can provide heating or cooling to the fresh air supplied through a 3rd party air handling unit or total heat exchanger such as our SAF series.

EEV-KIT

- EEV-KIT is the control kit for operating the locally provided AHU or FCU with direct expansion heat exchanger coils in connection with the KXZ / KXE6 system.
(AHU : Air Handling Unit, FCU : Fan Coil Unit)
- EEV-KIT is composed of one EEV-Control ASSY and one EEV-Set.

Features

EEV-Control Assy has 2 types.

Refrigeration system	EEV-Control Assy	
	EEVKIT6-E-M	EEVKIT6-E-C
Single	Not Use	1 box-Many boxes
Multiple	1 box (for master)	Many boxes(for slave)

EEV-Set Select from following 3 types according to the coil capacity.

Type	EEV6-71-E	EEV6-160-E	EEV6-280-E
Capacity	22-71	90-160	224-280

System configuration

- Single refrigeration system EEVKIT6-E-C ... Possible with multiple
- Multiple refrigeration system EEVKIT6-E-M (1) + EEVKIT6-E-C ... Possible with multiple (Max32)
- EEVKIT6-E-C is common for both single and multiple refrigeration systems

Single refrigerant system

- Single refrigeration system is one that can have multiple outdoor units on one refrigerant pipe work circuit.
- There are 2 types of EEV-KIT systems that can be built into the single refrigeration system.
- System A : one EEV-KIT.
- System B : multiple EEV-KIT's.

System A

- This system has only one set of EEV-KIT built into one indoor unit with only one heat exchanger. This system can be applied to an indoor unit whose capacity is up to 10HP.

System B

- System B is a system that has multiple EEV-KIT's built into one indoor unit with multiple heat exchangers on one refrigerant circuit.
- This system can be applied up to 60HP(for KXZ), 48HP(for KXE6) AHU capacity.

Multiple refrigerant system

Multiple refrigeration system is an AHU system with

- 1) Multiple independent refrigerant circuits
- 2) One master control to control the whole system.

Advantage

- Large systems are possible [max capacity 896kW (Indoor unit : 28kW x 32)]
- External control
- Capacity step control

Additional parts over a single refrigeration system

- One master control

The slave EEV control and EEV set are the same as a single refrigeration system.

Connection to SUPERLINK II

Single refrigeration system

Multiple refrigeration system

Simple setting **REMOTE CONTROL**

Advanced touch screen panel with full dot Liquid Crystal display

User friendly

- LCD panel with light tap operation introduced as the industry's first
- Simple interface with only three buttons

High level of visibility

- Big LCD with 3.8 inch full dot display
- Back light function
- Multi language display (9 languages)

RC-EX1A

Run / Stop

High power operation

The highest capacity operation (Max 15 minutes)

- Increasing compressor speed
- Increasing air flow volume

Energy-saving operation

- Changes set temperature.
At 28°C in cooling mode and 22°C in heating mode, 25°C in auto mode.
- Operation correction by outdoor temperature

Simple setting by tapping button only

1. Basic operation

All settings done by tapping touch screen panel

Operation mode setting screen

The desired operation mode can be selected by simply tapping this button.

Operation mode

Setting temperature screen

You can select the temperature as desired by tapping ▲▼ button.

2. Main functions

Saving energy

- Sleep timer
- Peak cut timer
- Automatic temperature set back
- Weekly timer
- Set ON/OFF timer by hour
- Set ON/OFF timer by clock

Comfort

- Individual flap control
- High power operation
- External ventilation ON/OFF
- Warming up operation
- Automatic fan speed
- Temperature increment setting by 0.5°C

Convenience

- LCD contrast setting
- Back light setting
- Filter sign
- Control sound
- Outdoor silent mode
- Summer time setting
- Home leave mode
- Indoor & outdoor temperature display
- Heating standby display
- Defrosting operation display
- Auto cooling/heating display
- °C/°F display
- Administrator settings
- Room name setting

Service

- Error code display
- Operation data display
- Next service date display
- Contact company display
- USB connection (mini-B)

Remote control RC-EX1A Series Utility Software

By connecting this system to the Remote Control, the Remote Control can be operated from PC.

Control Systems

<Individual control>

Remote Control line up (except SAF)

	indoor unit	remote control		indoor unit	remote control	indoor unit	remote control	indoor unit	remote control
wired	all models	RC-EX1A RC-E5 RCH-E3	wireless	FDT FDTG FDTW	RCN-T-36W-E RCN-TC-24W-ER RCN-TW-E	FDTG FDK22~56 FDK71	RCN-TS-E RCN-K-E RCN-K71-E	FDE FDFW others*	RCN-E-E RCN-FW-E RCN-KIT3-E

*FDTQ, FDU, FDUM, FDUT, FDUH, FDU-F

Wired remote control (option)

RC-E5

The RC-E5 controller enables extensive access to service and maintenance technical data combined with easy to use functions and a clear LCD display.

Run hour meters to facilitate maintenance checking

RC-E5 stores operation data when an anomaly occurs and indicates the error on the LCD. It also displays cumulative operation hours of the air conditioner and compressor since commissioning.

Room temperature controlled by the remote control sensor

The temperature sensor is housed in the top section of the remote control unit. This arrangement has improved the sensitivity of the remote control unit's sensor, which permits more finely controlled air conditioning.

Weekly timer function as standard

RC-E5 provides (as a standard feature) a weekly timer, which allows one-week operation schedules to be registered. A user can specify up to four times a day to start/stop the air conditioner. (Temperature setting is also possible with the timer).

Timer operation

Changeable set temperature ranges

RC-E5 allows the upper and lower limits of a set temperature range to be specified separately. By adjusting a set temperature range, you can ensure energy saving air conditioning by avoiding excessive cooling or heating.

Changeable range	
Upper limit	20~30°C(effective for heating operation)
Lower limit	18~26°C(effective for non-heating operation)

Simple remote control (option)

RCH-E3 (wired)

Considering specialized usage in hotel rooms, control buttons are limited only to minimum required functions such as ON/OFF, mode, temperature setting and fan speed. It is really simple and easy to use.

Up to 16 units

It can control up to 16 units individually, with pressing the AIR CON No. button.

AUTO restart

This function allows starting the air conditioner automatically when power supply is restored after power failure or by turning on the power switch.

* RCH-E3 is not applicable to the Individual flap control system and the Flap control system.
* When RCH-E3 is used, the fan speed setting can only be set to 3 speed settings (Hi-Me-Lo).

Thermistor (option)

SC-THB-E3

In case sensor in the indoor units or the remote control sensor can not sense the room temperature correctly, or individual remote control in each room is not required but only sensor is required (as when center control system is in place), install SC-THB-E3 at proper place in the rooms.

8m

Wireless remote control (option)

For wireless control simply insert the infra-red receiver kit on a corner of the panel

RCN-T-36W-E, RCN-TC-24W-ER

RCN-TW-E

RCN-TS-E

RCN-K-E, RCN-K71-E

RCN-E-E

RCN-FW-E

RCN-KIT3-E

* The wireless remote control is not applicable to the Individual flap control system and the flap control system.
* When the wireless remote control is used, the fan speed setting can only be set to 3 speed settings (Hi-Me-Lo).

<Control System> SUPERLINK-II

MHI has now combined simplicity of installation with our highly sophisticated Superlink-II control system, to offer building owners and occupiers a comprehensive control and management system, while providing complete commissioning and service maintenance assistance for installers and service engineers. The Superlink-II network utilises two wire, non-polar cable - for further details of wiring.

Superlink-II is an advanced high speed data transmission system that can connect up to 128 indoor units and 32 outdoor units as a network. MHI offers a wide range of control options for the Superlink-II network to suit any application large or small, as well as connection to new or existing building management systems. Individual MHI split systems can also be integrated on to the Superlink-II network using SC-ADNA-E.

<Central Control> SC-SL4-AE/BE

MHI introduces the full colour touch screen central control SC-SL4-AE/BE, with 9 inch interactive LCD display. Offers control, monitoring, scheduling and service/maintenance functions for up to 128 indoor units. Control with PC is available by use of internet explorer.

Indoor units can be controlled, scheduled, monitored and either individually, as groups or as blocks of groups with the following functions:

Control	Monitoring	Scheduling	Administration/Service
Run/Stop / Home leave	Operating state	Yearly schedule	Block definition, Floor layout
Mode (cool/heat/fan/dry/Auto)	Mode	Today's schedule	Group definition
Set temperature	Set temperature	Detailed daily schedule	Unit definition
Operation permitted/prohibited	Room temperature	Season setting	Time and date setting
Fan speeds	Operation permitted/prohibited		Alarm history
Air direction	Fan speed		Energy consumption calculation period
Filter sign reset	Air direction		Energy consumption, cumulative operation time
Demand control (3 steps)	Filter sign		Flap control setting
Emergency stop	Maintenance (1, 2 or back-up) Outdoor air temperature		Operation data monitoring Data logging (Run / Stop set temperature , room temperature , outdoor air temperature)

PC requirements: Windows Vista or Windows 7, 8.1
Monitor resolution 1280 x 1024 or more.
Web browser requirements: Internet Explorer 9, 11

Schedule setting

For each group

Schedule settings for each group are possible. The RUN/STOP/HOME LEAVE time, operation mode, remote control Lock/Unlock setting, temperature setting, energy setting, and silent mode can be set up to 16 times per day.

Yearly Schedule

Schedule settings for a year are also possible. The weekday, holiday, special day 1 or special day 2 can be selected and set.

Operation time history

Possible to check operation time history for cooling and heating separately.

Alarm history

A maximum of 300 records is displayed for the history of error occurrence and restoration in the unit of air-conditioner. It is possible to output the history data to a CSV data file.

High visibility

Increasing in size from 7 to 9 inches

Contrast between five colors for icon display and black light base screen has achieved high visibility.

Green : in operation
Blue : stop
Red : error
Yellow : communication error
Gray : no groups

Block layout function

Web function

You can monitor and control up to 128 indoor units (Max.128 groups) from a PC or tablet PC.

<Example>
Monitoring and operating air-conditioners in a lecture room of a university

3 levels of demand control from 2 external inputs

Demand level 1 – Any indoor unit set to D1 (Demand level 1) has its temperature set point shifted by +2°C in cooling mode or -2°C in heating mode and cannot be operated from the local remote controller

Demand level 2 – Any indoor unit set to D1 or D2 switch to fan only mode and cannot be operated from the local remote controller

Demand level 3 – Any indoor unit set to D1 or D2 or D3 switch to fan only mode and cannot be operated from the local remote controller

Electric power calculation function:

(for SC-SL4-BE only)

SC-SL4-BE gives electric power consumption data (kWh) for each indoor unit, each group, each SUPERLINK II system, and each watt-hour meter input.

	SC-SL4-BE
Export data by	USB / LAN
Calculation software	Included
Watt-hour meter pulse input (Maximum)	8
Max connectable indoor units	128

Item	Model	SC-SL4-AE/SC-SL4-BE
Ambient temperature during use		0 ~ 40°C
Power supply		1 Phase 100-240V 50/60Hz
Power consumption		9W
External dimensions (Height x Width x Depth)		172mm x 250mm x 23 (+70) mm
Net weight		2.0kg
Number of connectable units (indoor units)		up to 128 units
LCD touch panel		Colour LCD, 9 inches wide
Inputs	SL (Superlink) signal inputs	1 system (Super link-II)
	Watt-hour meter pulse input*	8-point, pulse width 80ms or more
	Emergency stop signal input*	1 point, non-voltage a contact input continuous input (closed, forced stop)
	Demand signal input*	2 point, non-voltage a contact input continuous input (closed, demand control)
Outputs	Operation output	1 point, maximum rated current 40mA, DC24 V All units stop; Open, any unit operating; Close
	Error output	1 point maximum rated current 40mA, DC24 V Normal; closed. If even one unit is abnormal; Open

* The receiving side power supply is DC 12V (10mA).

The air conditioning charges calculations of this unit are not based on OIML, the international standard.

<Central Control>

SC-SL1N-E

Start/stop control of up to 16 indoor units either individually or collectively.

Simple centralised control.

1. The SC-SL1N-E is connected to the Superlink-II network via 2-core, non-polar wires ('AB' connection).
2. It will monitor and control the start/stop function of up to 16 units, with the sixteen operation button.
3. The unit or group numbers in operation or in need of service are displayed with an LED.
4. Collective start/stop is also available through the simultaneous on/off button.
5. Up to 12 SC-SL1N-E units can be connected to a Superlink-II network (consisting of up to 128 indoor units).
6. If a power failure occurs, the SC-SL1N-E will resume the operation of the system according to a stored operation condition, once power is restored.

SC-SL2NA-E

Central control of up to 64 indoor units including weekly timer function as standard.

1. The SC-SL2NA-E is connected to the Superlink-II network via 2-core, non-polar wires ('AB' connection).
2. It will monitor and control the start/stop function of up to 16 units, or 16 groups of units, with the sixteen operation buttons.
3. It also monitors and controls the following functions for individual units, groups of units or the complete network: operation mode, set point temperature, return air temperature, louvre position, error code. Air flow and center lock function.
4. The unit or group numbers in operation or in need of service are displayed with an LCD.
5. Collective start/stop is also available through the simultaneous on/off button.
6. If a power failure occurs, the SC-SL2NA-E will resume the operation of the system according to a stored operation condition, once power is restored.
7. The SC-SL2NA-E can be connected to an external timer to facilitate timed on/off cycles.

An SC-SL2NA-E performs the start/stop control, monitoring and mode setting of up to 64 units. It is a high quality air conditioner control system that allows up to 64 indoor units to be freely grouped into 1 to 16 groups.

It allows not only the start/stop control but also the monitoring, display of operation statuses such as in operation or in need of service and mode setting such as switching of operation modes of connected units collectively, by group or individually.

• Outer dimensions: H120 x W215 x D25+35*mm.

35* is the measurement including the part contained in a recess.

SC-GIFN-E Interface kit

- Applicable products
Ventilation fan, Air purifier
- By using SC-GIFN-E together with central control such as SC-SL1N-E, SC-SL2NA-E and SC-SL4-AE/BE, you can start-stop, operate & monitor the operation of applicable products.

Note:Please consult dealer for combination of center controls and BMS interface units.

<PC windows central control>

SC-WGWNB256-A/B, SC-WGWNB-A/B (Web gateway)

Production by order

(SC-WGWNB256-B/WGWNB-B are with electric power calculation function)

In case of SC-WGWNB256-A/B, control and monitoring of up to 256 cells (some cells can have two or more indoor units and total number of indoor units can be up to 256 units) centralised to a network PC using the Superlink-II web gateway. Simple installation is assured with no special software requirements, operation is via Internet Explorer. A low power embedded CPU and compact flash ROM ensure a large storage capacity with high reliability (no moving parts such as a PC fan, etc.). An IP address filter function combined with three-level user authentication check also ensures security.

Additional engineering service cost etc. is required.
Please consult your dealer when using this central control.

PC requirements: Windows XP or Windows Vista or Windows 7.
Monitor resolution 1024 x 768.

<BMS interface unit>

SC-BGWNA256-A/B, SC-BGWNA-A/B (BACnet gateway)

Production by order

(SC-BGWNA256-B/BGWNA-B are with electric power calculation function)

SC-BGWNA256-A/B, SC-BGWNA-A/B are interface devices that convert MHI's Superlink-II communication data to BACnet code. In case of SC-BGWNA256-A/B, up to 256 cells (some cells can have two or more indoor units and total number of indoor units can be up to 256 units) are controlled centrally from a building management system.

Additional engineering service cost etc. is required.
In case of SC-BGWNA256-B/SC-BGWNA-B, communication test by qualified person regarding electric cost calculation function is required before commissioning.
Please consult your dealer when using this gateway.

SC-LGWNA-A (LonWorks gateway)

Production by order

SC-LGWNA-A is an interface device that converts MHI's Superlink-II communication data to LonWorks code. Control and monitoring functions of the a/c system for up to 96 indoor units can be integrated to a central control point via the building management system network.

Additional engineering service cost etc. is required.
Please consult your dealer when using this gateway.

INTESIS BMS Interface for MHI air conditioners

All technical support, including specifying work, compatibility issues, product quality (repair and replacement issues), product liability issues and the required after sales service (including spare parts supply) will be provided by Intesis as it is an Intesis product.

Product sales and delivery will be conducted by Intesis as well.

For details concerning such matters please directly contact Intesis.

Integration of MHI VRF in your KNX installation by Superlink

MH-AC-KNX-48

(Max 48 indoor units / Superlink I & II)

MH-AC-KNX-128

(Max 128 indoor units / Superlink II)

INTEGRATED GATEWAY

FDC560KXZWE1(FDC280×2)	56.0kW	FDC1000KXZWE1(FDC335×3)	100kW
FDC615KXZWE1(FDC280+FDC335)	61.5kW		
FDC670KXZWE1(FDC335×2)	67.0kW		

Features

- 1. High efficiency (EER/COP)**
 - Energy saving → Reduction of operation cost!
- 2. Compact design**
 - Easy transportation and installation
 - Elevator carrying
- 3. BMS (Building Management System)**
 - Can use the same BMS as air-cooled KX
 - Available to large-scale and fine control
- 4. Serviceability & Maintenance**
 - Service and maintenance of main parts can be done from the front side only
 - Useful service tools (Mente-PC, SL-Checker etc.)

Applicable to

- 1. High-rise Building**
 - 50m <FDC> , -100m <FDCH>
 - 100m or higher in height <FDCW>
- 2. Glass-exterior facade Building**
 - Possible to hide KXZW units and to keep fine sight

*1 Select the total pipe length depending on the connectable capacity of indoor units.

Range of operation

*2 The difference between the longest and shortest indoor unit piping from the first branch must be within 40m.

*3 In case of less than 50m, the High Head models can not be applied. In case Indoor unit is higher than outdoor unit, the High Head models can not be applied.

Refresh series

If replacing a used unit with a new one, these units can reuse existing piping.

Model No.	Nominal Cooling Capacity
FDCR224KXE6	22.4kW
FDCR280KXE6	28.0kW

<Option>

FDCR-KIT-E : Service valve kit

- Applies to a wide range of pipe sizes (R22, R407C, R410A standard size).
 - Meets to a short period of renewal installation.
 - Savings on replacement expenses such as scrapping waste material or procuring new pipe.
 - Possible to replace the existing unit with a new larger capacity unit.
 - Possible to replace plural systems with one system.
- For example: Existing 5HP x 2units can be replaced with a new 10HP x 1unit.

1. The data are measured under the following conditions(ISO-T1). Cooling: Indoor temp. of 27°CDB, 19°CWB, and outdoor temp. of 35°CDB. Heating: Indoor temp. of 20°CDB, and outdoor temp. of 7°CDB, 6°CWB.
2. Sound pressure level indicates the value in an anechoic chamber. During operation these values are somewhat higher due to ambient conditions.

Advanced refresh function

◆ When the existing unit is operable

The existing pipe can be reused by cooling operation only.

Pipe refresh kit and Service valve kit are not required.

1. Implement cooling operation of all indoor units for more than 30 minutes.
2. Implement pump-down after cooling operation.
3. Recover refrigerant and remove the existing outdoor unit and indoor unit.

◆ When the existing unit is not operable

The existing pipe can be reused by washing operation after connecting Refresh outdoor units, Pipe refresh kit and Service valve kit.

Connecting and removing of Refresh outdoor units and Pipe refresh kit is very easy by use of flexible pipe and flanges.

1. Pipe washing operation is implemented by changing dip switch on the outdoor unit PCB.
2. Completing washing is monitored via 7-segment display on the outdoor unit PCB.
3. As washing operation is about 60 minutes, it can meet to a required short period of renewal installation.

7-segment display

Notes:

- (1) It must not be surrounded by walls on the four sides.
- (2) The unit must be fixed with anchor bolts. An anchor bolt must not protrude more than 15mm.
- (3) Where the unit is subject to strong winds, lay it in such a direction that the blower outlet faces perpendicularly to the dominant wind direction.
- (4) Leave 1m or more space above the unit.
- (5) A wall in front of the blower outlet must not exceed the units height.
- (6) The model name label is attached on the lower right corner of the front.
- (7) Connect the Service valve with local pipe by using the pipe of the attachment. (Gas side only)
- (8) Mark ※ shows the connecting position of the local pipe. (Gas side only)

Mitsubishi Heavy Industries **KXZ** /further information

Mitsubishi Heavy Industries operates a continuous CSR (Corporate Social Responsibility) policy, with a role to realise a sustainable society through it's various areas of business.

Creed

- We strongly believe that the customer comes first and that we are obliged to be an innovative partner to society.
- We base our activities on honesty, harmony, and a clear distinction between public and private life.
- We shall strive for innovative management and technological development from an international perspective.

Reason for Instituting the Creed

In Japan there are many enterprises with their own "creeds" which simply represent their management concept.

Mitsubishi Heavy Industries, Ltd. has a creed of this type, also. It was instituted in 1970 on the basis of the policy advocated by Koyata Iwasaki, president of Mitsubishi Goshi Kaisha in the 1920's, to indicate the essential attitude of the company, the mental attitude of the employees, and the future directions of the company.

The reason for instituting the present creed is so that all of us can call to mind our one hundred years of tradition, and strive for further development in the future.

Issued 1 June 1970

MHI's creed was established based on "The Three Corporate Principles" shared by the Mitsubishi Group from the company's beginnings. In the spirit of this creed, MHI continues its efforts to fulfil its three corporate social responsibilities (CSRs): "corporate governance and compliance," "the environment, human rights and labour," and "contribution to society through business activities."

Contribution to Society through Company Business

The KXZ product range has been developed in compliance with the Mitsubishi Heavy Industries Policy on the Environment.

In order to make the sustainable development of society possible, a basic policy on environmental matters has been established.

Pursuant to the express provision of Section 1 of its creed that “We strongly believe that customers come first and that we are obligated to be an innovative partner to society,” MHI shall, as a matter of primary importance, strive, through its R&D, manufacturing and other business activities, to play a useful role in the development of society. To this end, while remaining aware that a business enterprise is a member of society, MHI shall endeavour, in all aspects of its business activities, to reduce the burden on the environment and shall concentrate and fully utilise its technological capabilities for the development of technologies and products that will protect the environment, thus contributing to the establishment of a society in which sustainable development is possible.

In order to realise its basic policy, MHI has set the following seven conduct guidelines.

1. Recognise that environmental protection is top priority in the company's operations, and encourage the entire company in its endeavours to protect and improve the environment.
2. Define roles and responsibilities regarding environmental protection by developing and maintaining a corporate organization designated for environmental protection, and create and implement corporate policies and procedures on environmental matters.
3. Endeavour to reduce the burden on the environment by preventing pollution, saving resources, saving energy, reducing waste, reusing materials, and recycling in all aspects of the company's business activities in R&D, designing, procurement of materials, manufacturing, transportation, use, service and disposal.
4. Endeavour to develop and provide advanced, highly reliable, unique technologies and products that contribute to solving environmental and energy problems.
5. Comply with national and local environmental laws and regulations, beyond mere compliance by enacting, implementing and evaluating voluntary standards where necessary, and to endeavour to continuously improve and promote environmental protection activities by establishing environmental goals and targets.
6. Endeavour to protect the environments of foreign countries by carefully examining the consequences of the company's overseas business operations and the exportation of its products, and to become actively involved in technological co-operation overseas in areas of environmental protection.
7. Provide environmental training and other programs to enhance the environmental awareness of all company employees, and take steps to expand public relations activities, such as providing environment-related information to the public and social contribution activities.

Number of offices/plants by region (Consolidated) as of May, 2014

On the land and sea, in the sky and even in space, MHI's stage of operations is expanding limitlessly. We manufacture more than 700 different products which support various industrial and civil activities in both domestic and international markets.

Ships, steel structures, power systems, machinery for both industrial and general use, air-conditioners, pollution reduction and environmental control systems, aerospace systems – the MHI product lines which create rich and comfortable living environments, are as harmonious as an orchestra.

What creates this harmony is MHI's general technological expertise developed over more than a century of hard work. We are highly esteemed in the world for providing high

quality products through untiring technological research and development. From new energy development and environmental concerns to the exploration of space, with the advent of the 21st century MHI is confronting a variety of issues to ensure the realisation of a society in which there is harmony between mankind and technology.

- Crude Oil Storage Barges
- LNG Tanks
- Boilers & Turbines
- Oil Production Plants
- Contra-Rotating Propellers
- Thermal Power Plants
- Combined Cycle Plants
- Fuel Cells
- Water Turbines
- Wind Turbines
- Geothermal Power Plants
- PWR Nuclear Power Plants
- Uranium Enrichment Equipment
- FBRs
- Co-Generation Systems

- Ultra-High Steel Stacks
- Refuse Incineration Plants
- Night Soil Treatment Plants
- Electrostatic Precipitators
- Flue Gas Desulfurization System
- Fluidized Incinerators
- CFC Collecting Equipment

- Spillway Radial Gates
- Steel Bridges
- Penstocks
- Desalination Plants
- Physical Distribution Equipment
- Engines

- Unloader & Container Cranes
- Mechanical Parking Facilities
- Integrated Automated Storage Systems
- Rubber & Tyre Machinery
- Skyrails
- Monorail Cars

- Jet Fighters
- Helicopters
- Missiles
- Tanks & Infantry Fighting Vehicles

Before starting use

Heating performance

The heating performance values (kW) described in catalogue are the values obtained by operating at an outdoor temperature of 7°C and indoor temperature of 20°C as set forth in the ISO Standards. As the heating performance decreases as the outdoor temperature drops, if the outdoor temperature is too low and the heating performance is insufficient, use other heating appliances as well.

Indication of sound values

The sound values are the values (A scale) measured in a chamber such as an anechoic chamber following the ISO Standards. In the actual installation state, the value is normally larger than the values given in the catalogue due to the effect of surrounding noise and echo. Take this into consideration when installing.

Use in oil atmosphere

Avoid installing this unit in as atmosphere where oil scatters or builds up, such as in a kitchen or machine factory.
If the oil adheres to the heat exchanger, the heat exchanging performance will drop, mist may be generated, and the synthetic resin parts may deform and break.

Use in acidic or alkaline atmosphere

If this unit is used in acidic atmosphere such as hot spring areas having high level of sulfuric gases or in alkaline atmosphere including ammonia or calcium chloride, places where the exhaust of the heat exchanger is sucked in, or at coastal areas where the unit is subject to salt breezes, the outer plate or heat exchanger, etc., will corrode. Please ask a dealer or specialist when you use an air conditioner in places differing from a general atmosphere.

Use in places with high ceilings

If the ceiling is high, install a circulator to improve the heat and air flow distribution when heating.

Refrigerant leakage

The refrigerant (R410A) used for Air conditioner is non-toxic and inflammable in its original state.

However, in consideration of a state where the refrigerant leaks into the room, measures against refrigerant leaks must be taken in small rooms where the tolerable level could be exceeded. Take measures by installing ventilation devices, etc.

Use in snowy areas

Take the following measures when installing the outdoor unit in snowy areas.

•Snow prevention

Install a snow-prevention hood so that the snow does not obstruct the air intake port or enter and freeze in the outdoor unit.

•Snow piling

In areas with heavy snow fall, the piled snow could block the air intake port. In this case, a frame that is 50cm or higher than the estimated snow fall must be installed underneath the outdoor unit.

Automatic defrosting device

If the temperature is low, and the humidity is high, frost will stick to the heat exchanger of the outdoor unit. If use is continued, the heating performance will drop.

The "Automatic defrosting device" will function to remove this frost.

After heating for approx. three to ten minutes, it will stop, and the frost will be removed. After defrosting, hot air will be blown again.

Servicing the air-conditioner

After the air-conditioner is used for several seasons, dirt will build up in the air-conditioner causing the performance to drop. In addition to regular servicing, we recommend the maintenance contract (charged for) by a specialist.

⚠ Safety Precautions

Air-conditioner usage target

The air-conditioner described in this catalogue is a dedicated cooling/heating device for human use.

Do not use it for special applications such as the storage of foodstuffs, animals or plants, precision devices or valuable art, etc.

This could cause the quality of the items to drop, etc.

Do not use this for cooling vehicles or ships. Water leakage or current leaks could occur.

Before use

Always read the "User's Manual" thoroughly before starting use.

Installation

Always commission the installation to a dealer or specialist. Improper installation will lead to water leakage, electric shocks and fires.

Make sure that the outdoor unit is stable in installation. Fix the unit to stable base.

Usage place

Do not install in places where combustible gas could leak or where there are sparks.

Installation in a place where combustible gas could be generated, flow or accumulate, or places containing carbon fibers could lead to fires.

Mitsubishi Heavy Industries, Ltd.
Air-Conditioning & Refrigeration Division
Machinery Equipment & Infrastructure
16-5, Konan 2-chome, Minato-ku, Tokyo, 108-8215 Japan
